---

Eric,  
Here are two examples of load estimates from the stormwater model - one for upstream load (assuming a concentration of 0.01 ng/L) and another for stormwater loads to each segment (per the City, Segment 1 gets 15% of all stormwater discharges, the Lagoon gets about 11%).  
Bruce

Subject: Loading Rates

Bruce, I was looking over your recent stormwater model report. Do you have loading rates for these elements - e.g., upstream loading, loading from stormwater as a result of atmospheric deposition? It seems that your output was focused on tissue concentrations. I would like to compare some of your loading estimates with what the LWG has presented in the round 2 report.

Thanks, Eric
